Glossary

App

The Sesame mobile app is available at the App Store and Play Store.

Sesame Network Dollar (SND)

SND is the crypto-asset that will be minted and issued by Sesame; these will be tradeable on exchanges.

Fiat currency

Fiat currency refers to traditional money e.g. US Dollars, Pounds Sterling, Euros, etc.

Merchant

Merchant refers to any business that has integrated Citizen's instant cardless payment solution into its checkout.

USDC

USDC is a multi-chain USD stablecoin that has been designed for real-time payments. It is the world's largest stablecoin with over \$50B in capitalisation. It is backed 1:1 with cash and short- duration U.S. Treasuries, and audited by Grant Thornton.

Prize draw

All active users will be automatically entered into a weekly free prize draw to win additional SND.

Quarterly bonus

The quarterly bonus is a payout attributed to all SND holders on a quarterly basis. Paid out in SND.

Stablecoin payment

A cryptocurrency whose price is pegged to an asset such as the U.S. Dollar. Stablecoin payments are made in USDC with real-time settlement.

Stablecoin yield

The return measure for staking (holding) the stablecoin over a period of time.

Staking

Staking is the process of holding crypto-assets in your wallet.

Is it a reward point? Is it cashback? No, it's better.

Sesame's reward scheme revolutionizes the concept – with instant and recurring rewards plus load of extra ways to earn more SND.

	sesame	Cashback	Points
Speed of settlement	Instant	60-90 days	Instant
Value	High	Variable	Low
Earn on all items	Yes	No	Yes
Prize draw	Yes	No	No
Recurring bonus	Yes	No	No

Our goal is to align you to the success of the company. Creating a symbiotic relationship, **where everyone wins together.**

Quarterly bonus

Every quarter we distribute an amount of SND, the amount of SND distributed is based on the overall transaction volume of all users on the network, and the amount of data relationships (number of merchants each user has transacted with).

100% Quarterly bonus (paid in SND)

50% to active users in the quarter

Each user that earned SND through payments or yield will qualify. Directly proportional to the number of SND earned during the quarter multiplied by each users loyal level (max 2 years)

50% to staked SND holders

Each user that holds an SND balance will qualify for this portion of the bonus. Directly proportional to the number of SND held multiplied by each users loyal level (max 2 years)

Flow showing the bonus distribution to SND holders. Holding more SND and for longer will give you a larger proportion of the bonus

Yield (launching H2 2023)

Quarterly bonus

APY

Getting yield paid in SND means the user is included in the quarterly bonus

How to qualify for the quarterly bonus

At the start of each quarter, as long as the opening SND balance plus the SND that is earned during the quarter, through payment cash-back and yield, hasn't decreased (through selling), the user will qualify for the relevant quarterly bonus pools. Merchant owned tokens do not qualify for the quarterly bonus.

Active user bonus

Customers that use the Sesame checkout payment product and/or hold stablecoin with Sesame, and choose to receive their yield in SND, will receive an allocation in the Quarterly bonus. This section of the bonus pool shall be divided by the amount of SND each user has generated during the quarter, with the loyalty multiplier then added.

Example

Jack has earned a yield of \$100 SND during the quarter and Amy has earned \$10 SND. Jack would receive 10x more than Amy in this portion of the bonus.

Staked SND bonus

Users that held their SND for the quarter, shall be issued an allocation from the other side of the bonus pool. Each users SND balance will be recorded at the start of the quarter, and as long as the balance doesn't drop below that level (through selling), they will qualify for their allocation of the bonus pool.

Example

If Benji and James both hold \$100 SND for the quarter, they shall receive equal allocation. If Benji holds \$100 and James holds \$200, then James shall receive 2x the allocation of Benji.

How does the loyalty multiplier work?

To reward those users that consistently qualify for the Quarterly Bonus, the loyalty multiplier is designed to encourage longer term holding of SND. Each consecutive quarter the multiplier increases by 0.25. The SND loyalty multiplier is up to a maximum of 2 years (8 quarters).

Example

Benji & James both staked \$100 SND. Benji has staked his SND for 2 years (8 quarters), James has staked his for 6 months (2 quarters), Benji will get proportionally 4x more of the staked SND loyalty bonus than James.

Am I required to report or do anything?

No, this is all in-built to the smart contract, you can just sit back and receive your allocation each quarter.

Token economics for merchants

Merchants that integrate Sesame's checkout product will be listed in the merchant directory.

This is the gateway for shoppers to discover stores and services.

Driving new customers, actively engaged in earning SND.

Premium packages

To increase conversion for merchants.

There will be optional premium packages that support higher customer activity and payment centric benefits.

Merchants will stake SND based on their volume of payments.

Token price economics

SND has been designed to minimize price volatility; utilizing inflationary, deflationary and price stability mechanisms, to encourage the long term rewarding of SND holders.

SND has multiple economic mechanisms to encourage the holding and buying of the token; and naturally counteract selling.

Buy	Hold	Sell
Individuals wanting higher cashback rates	Quarterly bonus inclusion	Don't want SND
Merchant premium listing access & top-ups	Loyalty bonus access	--
Platform marketing tools for merchants	Merchant staking for premium listing package	--
Individual buying for in-kind yield access	Speculative SND price increases	--
Speculative buyers	--	--

The most popular model of valuing a token, the 'Equation of Exchange' proposed by Chris Burniske, states that tokens with lower velocity will see higher prices than other digital assets.

$$M \times V = P \times Q$$

M = the total value of the tokens

V = the velocity of the tokens
(number they have been traded over a given period) of times

P = the price of resources monetised by the network

Q = total resources used by the network

SND Deflationary mechanisms

To counteract against high inflation, Sesame has created multiple mechanisms that involve the burning of tokens. A combination of decreasing inflation associated with cashback tokens, combined with an increased token utility, and token spend opportunities such as our premium usernames, NFT and virtual goods marketplace.

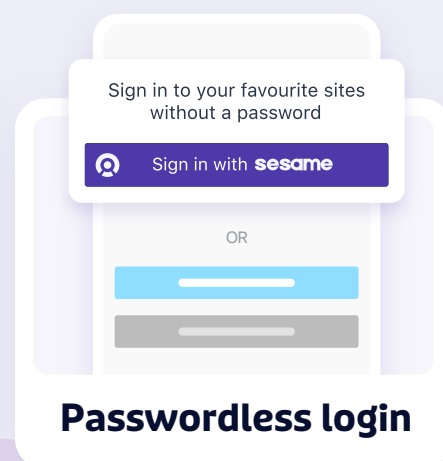

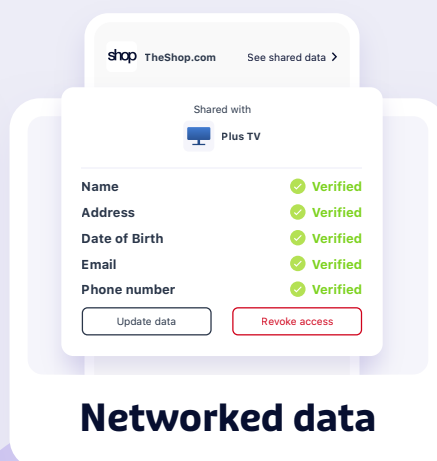

By the time of the fourth tranche, we expect to be close to a net balance.

	Gold tier	Standard tier
Initial 10B tranche	15%	5%
Second 10B tranche	10%	1%
Third 10B tranche	5%	0%

Merchants will also be part of this initiative, with token spend from in-platform marketing.

And in the future, merchant subscriptions for:

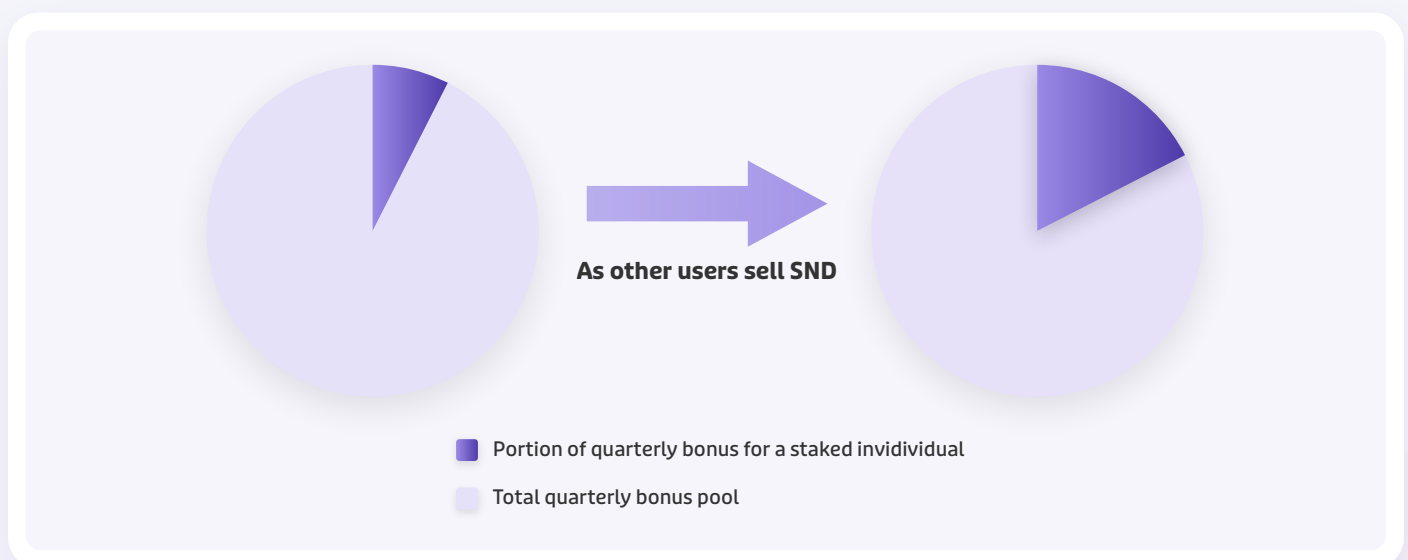

SND taxation

Sesames staking model is one that is dynamic in terms of users being able to unstake their balances in a frictionless manner, but is designed to be sustainable in benefitting those that stake longer.

As natural inflation shall occur from the issuing of SND via Cashback and Yield, as well as our Quarterly Bonus. Implementing an SND taxation model for users that wish to earn and sell SND quickly.

Our taxation mechanism shall apply a SND tax on those they wish to sell within set timeframes, in a manner that benefits the rest of the SND holders, whereby half of the taxed SND will be added to the next Quarterly Bonus for distribution to other holders, and the other half will be burned.

Any SND that is sold within 6 months shall be taxed at 40%, and those within 6-12 months at 20%. After 12 months there will be zero tax.

For example, if a user earns 100 SND and wishes to sell them after 1 week, the tax rate is 40%, so it will cost them 40 SND to unstake. In this example, half of the tax (20 SND) will be added to the next Quarterly Bonus for reissuance, and the other half of the tax (20 SND) will be burned.

Governance

Those users that have reached the 'VIP cashback' shall automatically be invited to join the governance committee. Therefore enabling the ability to buy-in or work-in; both cases adding value to the token. People with a vested interest in the future value of SND are empowered to make certain key decisions around those associated with token economics.

The next quarterly bonus should be tokens issued or burned?

Voting ends: Sept 12th 8:00pm BST

SND issued		SND burned	
SND issued	102,277	SND burned	60,277

Voting weight will be directly proportional to the token ownership level of the user.

Lock-in periods

In order to help minimise price volatility SND have a defined period of time before they can be sold.

Purchased SND

0 days from when bought

Quarterly bonus

60 days from when issued

Prize draw SND

Sesame DAO NFT

Within the Sesame ecosystem there are two types of NFT; one that can be bought and sold like an asset, and one that can only be 'earned', with no financial value associated or ability to transfer.

The Sesame DAO NFT is the latter, operating like a membership card, rather than the non-fungible component being linked to the ownership of art, it is linked to the unique component of access.

The access is for the DAO component of the company, a community based around the long-term success of Sesame and SND.

DAOs seek to:

- Provide members with a voice through governance
- Flatten hierarchy and create fluid workstreams
- Allocate resources to achieve a core mission

Sesame's DAO NFTs will be granted to those who complete the 2-year SND loyalty multiplier. Those that are considered long term holders and supporters.

We're aiming and hoping for use cases and proposals along the lines of: Events and Sports team sponsorships, Social impact initiatives and Charitable partnerships. But ultimately the decision will be in the hands of the holders.

The DAO treasury will initially become available once the second minting of tokens occurs. 10% (1B tokens) will be allocated to the DAO on a 5-Year vesting schedule.

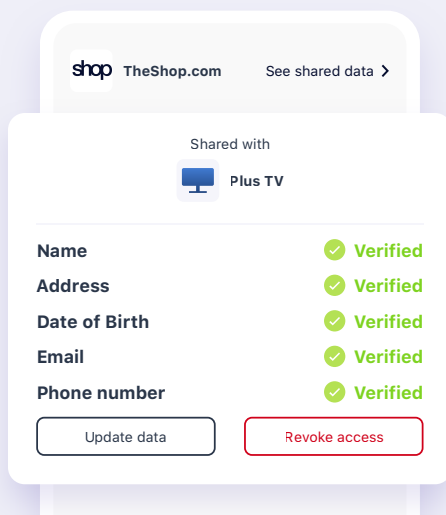

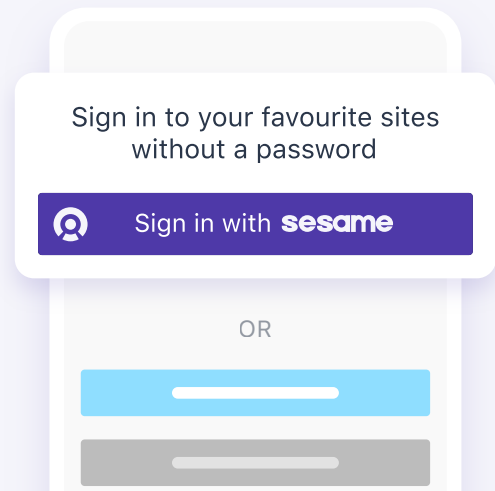

Once the DAO NFT is earned, it is not taken away. Users will not lose their DAO NFT if they disqualify themselves from subsequent quarterly bonuses for instance.

FAQs

I'm interested, what happens now?

Soon our pre-launch waitlist will open. Here you will be given a position in the waitlist which will define how much free SND you get.

Can I get higher up the waiting list?

Yes, use your referral link in the app. The more people you invite the higher up the waitlist you'll move.

What's the difference between checkout with Sesame cashback and standard cashback?

Checkout with Sesame cashback is from using Sesame's payment method and paying via your bank app. We have a direct integration with the retailer which allows us to offer a high cashback rate. Standard cashback is from affiliate links and the rate is set by the individual retailer and will be the same rate across all cashback sites.

Will this cost me anything?

No, using Sesame is free.

Can I qualify for both parts of the quarterly bonus?

Yes, we hope and expect most users will qualify for both.

Do tokens staked by Merchants qualify for the quarterly bonus?

No, the quarterly bonus is only allocated to users. Tokens that are held by merchants will not be included in any allocation calculations for the bonus.

Do I pay with SND?

No, you pay with a stablecoin balance held in the app. SND is issued as the crypto cashback.

How do you handle the cashback tiers and token price fluctuations?

Once a user reaches the level of SND ownership, they will be issued with the tier upgrade. To protect against SND price volatility, even if the SND price increases, the user will not be downgraded, unless they sell their SND level to below the tier requirement.

How can you offer yield higher than bank rates?

Unlike most other apps, we offer our customers the maximum yield return from our DeFi staking partners. The DeFi pools offered will vary in risk and return.

Where is SND held?

Your SND balance is held within the Sesame mobile app

What happens if I lose my loyalty multiplier?

It will not affect qualification for the quarterly bonus. If you decide to disqualify yourself from the loyalty multiplier, it will simply revert back to a multiplier of 1, and shall begin accruing again from the next quarter.

Who is the team behind Sesame?

Sesame was founded by two serial entrepreneurs with experience in e-commerce, digital banking, crypto and social media. The team is now located in London, New York, Stockholm and Tokyo.
